ELEPHANT rides come high, but the people of India will have them .- Cin-

A SCHOOL-TEACHER recently electri fied her pupils, who were annoying her with questions, by saying, "Children, I am engaged." Seeing the general look of astonishment, she added, "but not to any fool of a man," and the excitement died away .- Kingston Free

LITTLE Master Roddy has been in the habit of putting his pennies into the box ders are piled upon bowlders of al. at Sunday-school, till last Sunday, when shapes and forms, and so promiseuousbreathless hurry, and shouted: "Mam ma! I shan't save up my pennies any

the till, fixed an arrangement on it, so that any one who tried to open the drawer, without understanding it, would his hand. And then he went out and known as the State-house bell. This was lowing process, without having forgot to explain the thing to the boss, at one time among the largest of the recourse to the ordinary one—that of and as soon as he gets able to be about again, he'd like to hear of a job.

A SAD-LOOKING man went into a Burlington drug-store. "Can you give me," he asked, "something that will drive from my mind the thoughts of sorrow and bitter recollections?" And the druggist nodded and put him up a little dose of quinine, and wormwood, and rhubarb, and epsom salts and a dash of castor oil, and gave it to him, and for six months the man couldn't think of any thing in the world except new schemes for getting the taste out of his mouth .- Hawkeye

THE boys were telling me a pretty good one down at Corning, N. Y., about a young fellow in commercial life named Blakie. He was in the hardware line. One day, when the boss was at dinner, a countryman came in to buy | The advertising fiend has not failed to some nuts. He found an article that suited him, and wanted a dozen. Young Blakie looked at the price-list and found that they were listed "25 cents a dozen -30 off." He gave a low, inverted whistle, and then, with a sudden inspiration, he handed the customer five cents and told him he could buy the nuts at the other store. "By George; said he, when he was telling the governor of the transaction, "I thought the best thing I could do was to save the nuts, anyhow."-Buffalo Ex-

A School for Actresses,

It is the last scene.

"Give me my robe, put on—"
Now stop. Not that way, if you please. I thought we agreed upon the rendering last time. 'Give me my robe,

"A dollar bill it is, and you wunt me put on my crown! Now, your head higher. Concentrate yourself, as I told you. Look at the angle of the room -looking at a blank wall gives a blankness to the gaze. Please take it again."

ter perfect there is no use for you to go to notice. Many of them have very Photographic Society a multiplying on. You have to stop at the first word, wrong, you have to look for the other right one, and lose all the impetus which tracks of a horse's hoof. Others glycerine and water (though the last are like the track of a wagon. Some one. Try again, please." "Give me my robe; put on my

excelled; that is, if you are going to dress for the evening. That will do very well for your dressing-room, but you will please to remember that this is a queen, going to dress for her last occasion—the daughter of kings, with her

mind full of dying as a queen should."
As you may gather, who are well up in your Shakespeare, as you ought to be, this is a dramatic lesson from the last scene in Cleopatra. One speaker is a well-known teacher of elocution, who trains pupils for the stage, the other is a handsome young lady, who is visited with immortal longings to go on the stage. She has just finished the preliminary vowel exercise, which actors require as a daily training, which, as a prima donna runs over her scales in her dressing-room before she goes on the stage, to clear and warm up the voice. I am installed for the hour as a curious friend, in a low chair by the fire. Teacher and pupil quite forget the presence of any one else in the earnestness of the lesson. The room, a large parlor, is hung with photographs and engravings which strike one at once as singuharly expressive. They are not quite the pictures which hang in ordinary drawing-rooms—the placid wood scenes of Furvenay and the sweet figures of miliais' love scenes, and the lovely, wan Marguerite at her window. The vigorous German photographs from Schiller and "Lohengrin;" historical scenes, full of action, which make good studies for attitude and costume; and, of course, Sarah Bernhardt's serious, attentive head, and exquisitely draped figure, our Lady of the Drama, not to be profane, before whom girlish aspirants pour out the homage and adoration of their souls. The center-table drawn out of their way, and the young lady takes its place, with one arm advanced in a gesture of command, about to go through her lesson in Cleopatra. - New York Mail.

Tramps and Their Signs.

Jim Ward, who signs himself "Chief," writes to the Troy Times: I have just returned to your city, after a tour of exploration down South lasting several months, and reading in your paper of January 21 an article on tramps and their marks, I desire to be allowed, as an old veteran of that "honorable" body known as "the tramp organizato correct a few mistakes. I claim that the tramps were the originators of the mystic marks which have so slices of light bread, spread thin with frequently adorned fences, gate posts butter, and lay in a pudding dish layers and doors, although it is possible that of this bread and raisins, till within an soap agents—members of another inch of the top. Add five eggs, well branch of the tramp organization— beaten, and a quart, of milk, and pour have since adopted these marks for over the pudding sait and spice to taste. business purposes. When tramping was Bake in twenty-five minutes, and eat good and that was some years ago with liquid sauce. Before using the it was understood by us that all houses raisins, boil them in a little water and where the inmates were good for food, put it all in. clothing or money were to be marked in order to give us little trouble when we wanted any thing. Where only a science accused him of being glad when meal could be obtained this fact was he heard of a death, and he became indicated by a small square, where convinced that even the probability of a fellow would get the grand bounce an X expressed it, and for clothing he was directed by XX. Money houses were marked \$; a house where the intractes were friendly but the dog untriendly, was marked by a great big D. With human misery. But at the present day tramps are not guided by these marks, as there are A Mr. Harris, formerly of Preston, few houses where tramps are regularly for educational purposes, and \$500,000 fed. The tramp bore is now played for educational purposes, and \$500,000 out; but whatever may be said against the tramp, it can not be denied that he has made his mark in this world.

A MR. HARRIS, formerly of Presson, England, has left that town \$1,250,000 for educational purposes, and \$500,000 to what is known as Queen Anne's Bounty Fund for aiding poor ciergy.

The Ringing Rocks.

A few days ago a representative of this paper, says the Reading (Pa.) Times and Dispatch, paid a visit to the geological wonder known as the Ringing Rocks in Montgomery County. Ringing Hill, as the people there call the eminence on which the celebrated rocks are found, is on the farm of Abraham Mench, in Pottsgrove Township, three miles northeast of Pottstown. The ringing rocks cover a space of about threequarters of an acre. In this tract bowl ders are piled upon bowlders of al. he came running into the house in a ly arranged that considerable agility is required to walk over them without falling. As one steps from rock to rock a ma! I shan't save up my pennies any more. The money don't go up to God-ringing sound, produced by the nails in I saw Mr. Kelly take it and put it in his pocket." An ingenious drug-store clerk, who remarkable acoustic properties are resuspected that some one was tapping vealed. Some of them give forth a rich, full tone which would probably vie with the best bell metal if the stones were icles bright by removing the "scale"

rocks. It has been broken off, however, but still has preserved its strong, full The general sound produced by striking the smaller stones resembles that of a blackbattered off by hammer-strokes, and the sides of many having names carved upon them, some parties who were unwillput in his appearance; and we are made aware of the merits of patent medicines,

A, ah, aw, c, ch, i, th, o, oo, ow.
"Drop your lower lip. Lower the jaw; let the sound come. Well."

ringing sound may be attributed. We have not heard, however, of any geological analysis being made. Half surmounts a cavity of considerable depth, the whole being known as the "Stone House." Near by the stone twenty feet high, which, from its peculiar contour, is called the "Hay Stack." Besides their acoustic qualities there is "Bring—no, give me your robe—" another singular circumstance about the Ringing Rocks which visitors rarely fail

of the larger indentations are said fac-similes of the human foot are "Very well-admirable-not to be claimed to be found among the smaller,

Railroad Construction in 1879.

The total of the year was 4,430 miles, which is the largest since 1872, and has been exceeded only four times in the history of the country-the four years ending with 1872. For the eight years that we have made up this record, which includes road on which track was laid during the year, whether opened for traffic or not, and differs materially from the figures in Poor's Manual (which usually include only road open for business), the miles of new road constructed have been:

 Year.
 Miles.
 Year.

 1872.
 7,340
 1876.

 1873.
 3,883
 1977.

 1874.
 2,025
 1878.

 1875.
 1,561
 1879.
 Compared with 1878, therefore, last year shows an increase of more than fifty per cent. At the close of 1878, according to Poor's Manual, the length of railroad in the country was 81,841 miles. Adding the mileage constructed in 1879, we have the grand total of 86,263 miles of railroad in the United States at the beginning of the current year, when the total of all Europe is of the world probably not 20,000 miles. The increase in this country was at the rate of about five and one-half per cent., the increase of population being doubt-less something less than three per ceut., so that the number of inhabitants per mile of railroad has become less during the year. The population of the country is now probably about 49,500,000, and this gives 574 persons to support one mile of railroad, against 585 at the beginning of 1879. In Europe the average is about 3,383 per mile of road, and in Sweden, where the mileage in proportion to population is largest, it is 1,667. We have given these figures before, but we repeat them to emphasize the fact that this is peculiarly the rail-road country, not simply because it is big, but because the same population requires a larger amount of railroad here than anywhere else.

Of the 4,430 miles, 923 1-2 miles are of narrow gauge (eighteen miles two feet, twenty-three miles three and onehalf feet, and the rest three feet gauge). This is less than twenty-one per cent. of the whole, against about thirty per cent. in 1878 .- Railroad Gazette.

USEFUL AND SCIENTIFIC.

COURT PLASTER .- The Scientific American gives the following directions for making this useful article: Soak isinglass in a little warm water for seventy-four hours; then evaporate nearly all the water by gentle heat; dissolve the residue in a little dilute alcohol, and strain the whole through a piece of open linen. The strained mass should be a stiff jelly when cold. Now stretch a piece of silk or sarsenet on a wooden frame, and fix it tight with tacks or pack thread. Melt the jelly, and apply it to the silk thinly and evenly with a badger hair brush. A second coating must be applied when the first has dried. When both are dry, apply over the whole surface two or three coatings of balsam of Peru. Plaster thus made is very pliable, and never breaks.

REMOVING IRON RUST.—The difficul ty of making small steel and iron art fashioned into bells. One of them in or oxide can, says the Electro-Metallurget four inches of brad awl rammed into particular, from its depth of tone, is gist, be readily overcome by the folscouring after pickling with dilute sulphuric acid. First let the articles be plunged into a boiling solution of caustic, potash or soda, for a few minutes to remove greasy matter. Then rinse in staith's anvil, some having a little clean water. Next, place the articles clearer ring than others, and no two in a weak pickle of sulphuric acid sounding just alike. In passing from about half a pound of acid to each galone to another of the larger rocks one is | lon of water. From ten to twenty minreminded of the tapping of car-wheels by the train-inspectors. Thousands of loosen the scale. Let the article be people visit this natural phenomenon again rinsed and afterward dipped by every summer. The rocks themselves | means of a perforated stoneware basket bear evidence of this, the edges being into a strong solution of commercial nitric acid for an instant, when the black oxide will be immediately removed. The dipping basket should have a rotary ing to take the time or trouble to chisel motion given to it while in the acid and their names upon the rocks having re- then removed promptly and plunged sorted to paint, and considerable daub- into cold water. The bearings sent to England a year or two ago. should be generous in size, proper pro-There is probably a metallic substance vision being made for oiling without in this group of bowlders to which the washing the grit into the bearings with ringing sound may be attributed. We the oil, and the ends of the bearings being protected by some device which geological analysis being made. Half effectually prevents the entrance of the a mile east of the Ringing Rocks, and grit. The stone should be secured to in the same range of hills, there is the shaft so that they can not turn with another group of bowlders which are the nuts as they are screwed up or unmuch visited. Here a lofty pile of rocks screwed. In hanging the stone great care should be taken to hang it true sidewise, not only for convenience in using, but because a stone that is not house is a huge bowlder, some fifteen or true sidewise can never be kept true edgewise.

> Another Letter-Copying Device. -Herr Adler, says the English Mechanic, has communicated to the Vienna process based upon the use of the of the larger indentations are said ent in a smaller quantity than usu-to resemble an elephant's foot, and al), used in the hektograph and other similar processes. For writing or drawing, Herr Adler uses a concentrated solution of alum, to which, in order to render the writing or drawing visible upon the paper, a few drops of some aniline color are added. Before laying the writing or drawing upon the gelatine surface, pass a damp sponge over the latter, and allow the mixture to sink in for a few minutes, so as to have a greater effect upon the alum. Then lay the written side downward upon the gelatine, and, after the lapse of a few minutes, on removing it, the writing will be found reversed and eaten into the gelatine film as if it were engraved. By means of an india-rubber roller a little common printing ink is spread over the plate and absorbed by the lines sunk by the alum, and again rejected on the application of moisture upon the paper laid down upon it, and smoothed over it by the flat hand. When removed, this paper will have upon it the first impression of the writing or drawing. For each succeeding impression the plate must be inked, as in lithography, by the india-rubber roller. A considerable number of impressions can be taken.

> about 100,000 miles, and of all the rest | glue which will stand damp atmosphere, says the American Journal of Industry, is a desideratum among mechanics, especially pattern-makers. Few know how to judge of the quality, except by the price they pay for it. But price is no criterion; neither is color, upon which so many depend. Its adhesive and lasting properties depend more upon the material from which it is made, and the method of securing pu rity in the raw material, for if that is inferior and not well cleansed, the product will have to be unduly charged with alum or some other antiseptic, to make it keep during the drying process. Weathered glue is that which has experienced unfavorable weather while drying, at which time it is rather a delicate substance. To resist damp atmosphere well, it should contain as little saline matter as possible. When buying the article, apply your tongue to it, and if it tastes salt or acid, reject it for any thing but the commonest purpose. The same operation will also bring out any bad smell the glue may have. These are simple and ready tests, and are the ones usually adopted by dealers and large consumers. Another good test is to soak a weighed portion of dry glue in cold water for 24 hours, then dry again and weigh. The nearer it approaches to its original weight the better glue it is, thereby showing its degree of insolubility.

> > ONE way to utilize straw as a fertilizer is to stack or pile it in a yard for the purpose, where the stock can run to it. In a year or two there will be immense piles of half-rotten straw and manure that makes an excellent top-dressing the first year, and the second year it may be plowed under with great advantage to almost any kind of crop.

A WRITER in the Country Gentleman says that of every thing he has tried for the cure of roup in fowls, the best is to take pulver-ized copperas and put a teaspoonful in three quarts of water, and give it to them to drink. Should they not drink much in a day or two, mix it into cornmeal and feed to them.
